牛人计划-中级项目课(10)

- 单元测试
- ・打包
- 部署
- 总结
- 扩展
- 面试

单元测试

测试四部曲

- 1. 初始化数据
- 2. 执行要测试的业务
- 3. 验证测试的数据
- 4. 清理数据

```
@Test
public void testLike() {
   likeService. like (123, 1, 1):
   Assert. assertEquals(1, likeService.getLikeStatus(123, 1, 1));
   likeService. disLike (123, 1, 1);
   Assert. assertEquals(-1, likeService.getLikeStatus(123, 1, 1));
@Test
public void testB() {
    System. out. println("B");
@Test(expected = IllegalArgumentException. class)
public void testException() {
    throw new IllegalArgumentException("异常");
@Before
public void setUp() {
   System. out. println("setUp");
@After
public void tearDown()
   System. out. println("tearDown");
@BeforeClass
public static void beforeClass()
   System. out. println("beforeClass");
@AfterClass
public static void afterClass() {
    System. out. println("afterClass");
```

打包

- 1. application 继承 SpringBootServletInitializer
- 2. pom.xml 打包改为war
- 3. mvn package -Dmaven.test.skip=true
- 4. 去除多余的main函数

```
@SpringBootApplication
public class ToutiaoApplication extends SpringBootServletInitializer {
    @Override
    protected SpringApplicationBuilder configure(SpringApplicationBuilder builder) {
        return builder. sources(ToutiaoApplication. class);
    }

    public static void main(String[] args) {
            SpringApplication. run(ToutiaoApplication. class, args);
        }
}
```

http://docs.spring.io/spring-boot/docs/current/reference/htmlsingle/#howto-create-a-deployable-war-file

部署

服务器安装

apt-get install nginx mysql-server libmysqlclient-dev maven redis

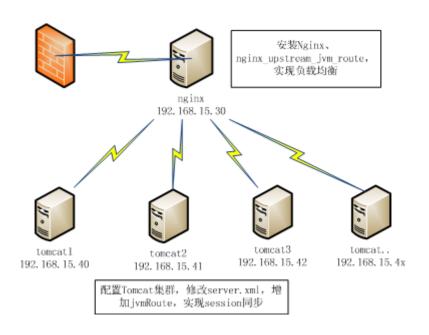

启动WEB:tomcat目录增加执行权限。 chmod +x startup.sh

配置Java: update-alternatives -config java

Redis链接修改

Nginx 配置 /etc/nginx/sites-enabled/c2

```
server {
    listen 80;
    server_name c2.nowcoder.com;
    location / {
        proxy_pass http://127.0.0.1:8080;
    }
}
```

总结

- 1. 开发工具Git, IntilliJ
- 2. Spring Boot, Velocity
- 3. myBatis
- 4. 登陆/注册
- 5. 云存储SDK
- 6. Redis
- 7. 邮件
- 8. 单元测试/部署

扩展

产品功能扩展

- 1. 用户注册,邮箱激活流程
- 2. 站内信互发
- 3. 首页滚动到底部自动加载更多
- 4. 管理员后台管理
- 5. 运营推荐置顶
- 6. 广告推广(smzdm.com)
- 7. SNS关注,个性化首页

技术深度扩展

- 1. 自定义排序
- 2. 缩图服务
- 3. 爬虫自动填充资讯
- 4. 个性化推荐

面试

myBatis和数据库 MVC,前后端分离,模板 单元测试 云SDK接入 AJAX Spring框架 Git工具

Thanks

祝大家顺利~
